QR CODE SAFETY CHECKER - SECURITY AUDIT REPORT

Local Threat Heuristics Diagnostic Sheet

SCAN METADATA

Payload Target:

http://192.168.1.105/secure-bank-login/update-password.php

Scan Date:

10/26/2026, 4:46:56 PM

Payload Format:

HTTP/HTTPS Link

SECURITY ASSESSMENT VERDICT

VERDICT: DANGER | Threat Risk Index: 100/100

Warning: This link displays strong signatures of a phishing or malicious portal!

DETAILED AUDIT CHECKLIST

[ALERT] **Host Audit: Raw IP Address Detected**

Using numeric IP addresses instead of registered domain names is a strong indicator of temporary phishing setups.

[ALERT] **Keywords Scan: Suspicious Terms Detected**

Contains credential triggers: login, secure, bank. Scammers inject brand names in subdomains to spoof identity.

[WARN] **Connection Encryption: Insecure (HTTP)**

Traffic is sent in plain text and can be intercepted. Legitimate log-in portals almost always use HTTPS.

[PASSED] **Redirect Check: Direct Domain Link**

No link shortening wrappers were detected. This link goes directly to the listed host.

[PASSED] **TLD Security: Standard Extension (.105)**

The extension used is a standard global TLD with active domain-authority controls.

[PASSED] **Subdomain Audit: Safe Domain Hierarchy**

Structure is simple, using standard domain directories without excessive sub-level prefixes.

[PASSED] **Port Check: Standard Connection Port**

Routes cleanly through default internet ports (HTTP 80 / HTTPS 443).

[PASSED] **Identity Audit: Standard Character Set**

Domain contains standard ASCII characters. No Unicode character mixing detected.
